

PRESS RELEASE

A compact powerhouse

Schulte - Elektrotechnik presents the PowerOrganiser at Orgatec 2024

Lüdenscheid, Germany, October 2024

Combined with the EVoline Wing, Schulte - Elektrotechnik's PowerOrganiser turns any drawer into a clever power source. The attractive, enclosed solution offers superior functionality for all sorts of applications.

The EVoline PowerOrganiser is a sophisticated, practical, in-drawer power solution that also organises cables and electronic devices. The versatile, fitted solution declutters workspaces and is ideal for all sorts of drawers.

The EVoline PowerOrganiser consists of the EVoline One – a socket discreetly integrated into the drawer organiser and the EVoline Wing to manage cables. The Wing uses behind-drawer space for concealed management of cables without kinking or getting them jammed. All the set's components are attached securely to ensure a reliable power supply and good cable management. The PowerOrganiser is designed to fit seamlessly into any standard drawers.

Schulte - Elektrotechnik guarantees flawless quality control along the whole value chain. Just like all other products, the One is inspected in house and given a serial number.

EVoline®

About Schulte - Elektrotechnik

Schulte - Elektrotechnik developed EVoline. In 1964, Siegfried Schulte started an engineering business in Lüdenscheid, Germany – and is still working on his vision of making electrical products safer and more intelligent. As a provider of modular system solutions for power and data connections, EVoline develops products for the entire range of power solutions in office environments or homes.

Today, Schulte - Elektrotechnik has more than 30 sales partners worldwide. All EVoline products are manufactured, with a high degree of vertical integration, by around 200 employees at Schulte - Elektrotechnik in Lüdenscheid, Germany. The high proportion of manual finishing guarantees the exceptional quality of the products made. EVoline has won several design awards. Schulte - Elektrotechnik has already spent more than five decades producing solutions in Germany in an energy-efficient, green manner.
