

PRESS RELEASE

Add-on module for inductive charging

Schulte Elektrotechnik presents the DisQ add-on module for its One socket at Ambiente 2025

Lüdenscheid, Germany, February 2025

Schulte Elektrotechnik is complementing its One system with a DisQ add-on module for cordless charging. It's easy to add to existing One sockets without altering existing furniture.

With power output of up to 15 watts and a magnetic system to keep devices in place during charging, the DisQ for the One is a flexible and efficient solution. The module integrates seamlessly with existing EVoline One sockets. During the charging process, sockets or data modules are freed up for other purposes and can be used simultaneously. This makes the option customisable to users' needs. The One DisQ is compact and comes in black and white, so it blends into any environment. It offers maximum functionality but requires little space.

The One DisQ recently garnered the German Design Award 2025 for its sophisticated design and functionality in the excellent product design computer and communication category.

Schulte Elektrotechnik guarantees flawless quality control along the whole value chain. Just like all other products, each DisQ is inspected in-house and given a serial number.

About Schulte Elektrotechnik

Schulte Elektrotechnik developed EVoline. In 1964, Siegfried Schulte started an engineering business in Lüdenscheid, Germany – and is still working on his vision of making electrical products safer and more intelligent. As a provider of modular system solutions for power and data connections, EVoline develops products for the entire range of power solutions in office environments or homes.

Today, Schulte Elektrotechnik has more than 30 sales partners worldwide. All EVoline products are manufactured, with a high degree of vertical integration, by around 200 employees at Schulte Elektrotechnik in Lüdenscheid, Germany. The high proportion of manual finishing guarantees the exceptional quality of the products made. EVoline has won several design awards. Schulte Elektrotechnik has already spent more than six decades producing solutions in Germany in an energy-efficient, green manner.
