

Press Release 05/2023

Conference Anywhere – Timetable Lift combines the analogue and digital side of hybrid collaboration to impressive effect

Wilkhahn already set new standards for modern innovation spaces with the introduction of Timetable Lift back in 2018. Mobile, battery-operated, with a flip-top table top that doubles as a magnetic, writeable whiteboard, the conference table is ideal for agile teams – whether sitting down or standing up. Wilkhahn is now taking the functionality of the Timetable Lift to the next level with smart new features geared towards the hybrid forms of collaboration used in innovative and creative processes. These range from a monitor mount for video conferences at sitting, standing or lounge-furniture height to precision-adjustable digital collaboration boards and integrated analogue and digital workshop tools. As well as its integrated wireless charging for smartphones and tablets, the range is rounded out with a sophisticated cable management concept and a high-performance wireless power module that allows maximum freedom when choosing a location for meetings.

Bad Münden, Germany, May 2023. Flexibility and mobility are essential for modern hybrid working. Recent years have seen marked changes not only in work styles but also in the way offices need to be furnished. The office has established itself more and more as a central hub for the kind of teamwork activities that don't lend themselves to remote working. The need to have differentiated furniture concepts for meetings with changing teams and at different locations creates new challenges for office planning.

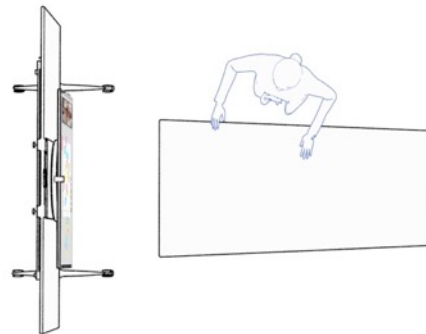

Hybrid meetings made easy: New features like the precision-adjustable tiltable table top and the mounts for collaboration boards add to Wilkhahn's mobile table range Timetable Lift, offering even more scope for agile teamwork. Photo: Wilkhahn

For maximum flexibility, Wilkhahn has added new features to its multifunctional table range Timetable Lift (Design: Andreas Störiko). These new features will help to attain an ideal workflow in both analogue and hybrid collaboration. This means that settings can be reconfigured in an instant, allowing the full versatility of the design to come to the fore. Just the thing for agile work where time together in the office is used above all for meetings or creative assignments.

Mobile video conference table feature

To make full use of digital content, the monitor mount increases Timetable Lift's workspace. Wilkhahn added a trapezoid-shaped table top variant to the mobile Timetable Lift to make sure that all participants in video calls can be seen.

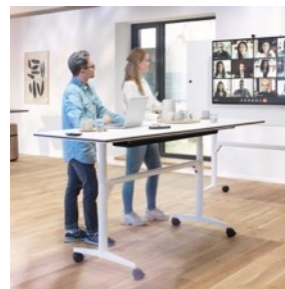

Timetable Lift with trapezoid-shaped table top for better participant visibility during video conferences; settings can be accentuated through a wide range of laminate and veneer designs.

Sitting

“Stitzing”

Standing

Lounge mode

With its precision-adjustable height, Timetable Lift serves as either a table or a height-adjustable monitor mount. This means that video conferences can be held with participants sitting or standing (or a mixture of the two) or in a lounge setting. Photos: Wilkhahn

The new monitor mount increases Timetable Lift's workspace, making it possible to present digital content as well. The monitor can be placed directly on Timetable Lift or attached to the optional wall mount for maximum flexibility and optimum visibility. Photos: Wilkhahn

Remote working through mobile chargers

Maximum mobility – i.e. without tripping over reams of cabling – is only possible if you can work without power cables. The Confair Power Server and Mov:e Power Units can supply power for monitors and collaboration boards.

With the mobile Confair Power Server – including the Mov:e Power Units – it is possible to operate numerous mobile devices without having to connect them to a power supply. Photo: Wilkhahn

Precision-adjustable tilt function permits ergonomic working and improved use of digital collaboration boards

Timetable Lift now has the option of being combined with an integrated tilt function that can be precision-adjusted in height and angle. This ensures an ergonomic working position regardless of whether users are sitting or standing. The tilt of the table surface

can be locked in any given position – from horizontal to vertical and anything in between – meaning that screens and work materials can be positioned exactly as needed.

With the precision-adjustable tilt function, collaboration boards can be flipped to the horizontal so that everyone can work on them. Photos: Wilkhahn

Integrated workshop tools for aiding innovative and creative processes

Thanks to the practical roll holder, almost all table and pinboard surfaces can be transformed into writable surfaces. Users can choose between rolls of paper or self-adhesive wall film, which sticks to virtually any surface without the need for adhesive and can be removed without any residue whatsoever.

Wilkhahn offers the additional option of a roll holder for different roll types that can be mounted without the need for tools. This means there is extra space for writing notes by hand. Photos: Wilkhahn

Innovative and powerful charging technology for maximum mobility

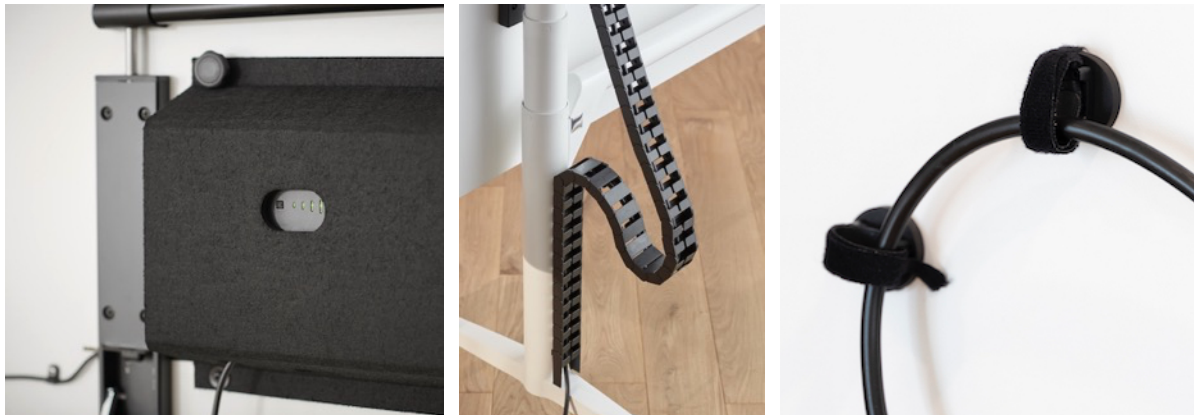

The new mobile charging set for Timetable Lift uses a second powerful battery to charge laptops, smartphone or tablets. At the same time, it ensures a smooth workflow by allowing meetings with state-of-the-art conference technology to be positioned anywhere in the room.

The range of charging options for mobile devices is rounded out by a number of table fixtures. For instance, smartphones, tablets and laptops at up to 60 watts can be charged using the USB chargers. The wireless charger is suitable for mobile devices at up to 15 watts. Photos: Wilkhahn

Clever cable management

With the many power supply options, the integrated cable management system keeps everything tidy and does away with tangled cables.

So that the workplace looks neat and tidy at all times, Wilkhahn provides a cable management system specially for the Timetable Lift. This consists of a black PET felt cover and optional cable management sets – an elegant solution with a strong aesthetic. Photos: Wilkhahn

Future-proof workspaces

The practical additional features that come with Timetable Lift bring out the best in modern and future-proof office environments and make a real difference to productivity. These features allow conferences and team meetings to be held quickly and spontaneously anywhere within the company's offices – with the best technical equipment. Whether for interactive conferences, workshops or project work, you can

adjust the settings as required – for example, based on the number of participants, the preferred conference options and the necessary multi-media equipment. The new Smart Timetable Lift is also a perfect starter option for users who are looking for a reliable solution without having to compromise on quality and performance when it comes to accessories.

The new additions to the Timetable Lift range are now available for order, and are subject to the usual delivery times.
